E-COMMERCE SYSTEMS & MARKETPLACE SPECIALIST

Danish localization is prepared in the content model. Full translated content can be added without refactoring routes, PDF generation, or page composition.

ABOUT

This locale currently reuses the English-first positioning strategy while the full Danish translation is being prepared in the CMS.

The important architectural point is that localized content already has a stable model, route, and PDF output.

CORE STRENGTHS

- No refactor is needed to add Danish later.
- Shared content structures reduce maintenance.
- PDF and page output stay aligned.
